ITALIAN/JORDANIAN | FORWARD DEPLOYED ENGINEER | SOFTWARE CONSULTANT

WORK EXPERIENCE

Prairie Shields Technology

March 2025 - Present

Forward Deployed Engineer & IT Solutions Architect

Remote, USA

- Architected a high-throughput, real-time event processing engine (Next.js, Node.js, PostgreSQL), achieving sub-50ms latency for data ingestion; mirroring the performance requirements of point-of-sale (POS) data streaming
- Engineered secure, multi-channel data ingestion pipelines with automated state-syncing and webhook-driven updates, ensuring reliable event capture and audit logging for distributed systems
- Directed end-to-end MVP development for enterprise clients, transitioning high-fidelity prototypes into production-ready systems with secure payment gateways and structured maintenance cycles to manage long-term technical debt

Wajeez

Nov. 2022 - February 2023

Software Engineer Intern

Amman, Jordan

- Engineered data-driven A/B testing frameworks to optimize user conversion flows, leveraging behavioral analytics to directly inform product strategy and personalization efforts.
- Collaborated in high-velocity Agile sprints, contributing to architecture discussions & QA review cycles

Clear Profits Digital Marketing

April 2021 - August 2022

Web Developer

Monmouth, Illinois

- Developed responsive web interfaces using Next.js and TailwindCSS, improving performance metrics and user engagement by 40%
 - Established automated testing pipeline using Google Analytics to capture and analyze website interaction data
 - Collaborated cross-functionally to scale digital marketing initiatives through continuous performance monitoring and refinement
-

EDUCATION

Bachelor of Science in Computer Science with Minor in Finance - *Class of '24* - Knox College, USA

Key Coursework: Software Engineering, Machine Learning, Artificial Intelligence, Software Testing, Database Management Systems, Applied Data Structures, Program Design and Methodology, Algorithm Design and Analysis

Certifications: Google IT Automation with Python

SKILLS

Real-Time & Distributed Systems: Golang, Rust, gRPC/Protobuf, WebSockets

Data Engineering & Storage: PostgreSQL, ScyllaDB, Redis, SQL, Python

Frontend & Personalization Interfaces: HTML, Astro, React/React Native, Next.js, TypeScript, TailwindCSS

Cloud & Infrastructure: Docker, CI/CD, Prometheus, FlyIO, Railway, Cloudflare

PROJECTS

LeadSouq (2026) | Golang, Typescript, ScyllaDB, Redis, Next.js

- Developed a real-time lead scoring and targeting engine, implementing natural language search to surface relevant behavioral patterns and optimize data attribution
- Architected a highly concurrent, distributed data ingestion pipeline (Golang) processing 34M+ records with 99.9% uptime, utilizing ScyllaDB and Redis for low-latency data retrieval
- Integrated Stripe payments and JWT auth; designed credit-based pricing with atomic transactions and rate limiting

MarketFlow (2025) | Discord, Golang, HTML, Hollywood/Actors, Protobuf, Mux, RPCS, Railway

- Built a high-frequency, real-time event processing engine (Golang, gRPC, Protobuf), successfully ingesting and analyzing 50k+ events/sec with <5ms P99 latency
- Reverse-engineered APIs to fetch and process real-time stock options data, enabling detailed financial analysis with trade sentiment
- Designed and created a congressional trade monitoring system using Golang, tracking 6000+ companies, with 40,000+ filings, 100+ lawmakers' and Congress' disclosures in real time

Gas Price CLI App (2025) | Rust, Reqwest, HTTP Client, GraphQL API, Serde, Tokio

- Real-time monitor and tracker command line interface with GraphQL handling requests; 99.9% uptime over 2 years
- Developed and maintained using Rust and React Native to visualize gas price trends and network activity
